20 March 1953

Memorandum for Deputy Director/Plans

25X1A1g

Subject: Effect of Possible Elimination of [REDACTED] Carried  
on by NSA Funds.

1. As part of the over-all analysis of national security programs now in process, the Director for Mutual Security submitted to NSC on 18 March an analysis of the effect on his operations if total appropriations therefore were reduced to a level of \$5.5 billions in FY 1954 and \$4 billions in FY 1955. This analysis was noted by the Council and will be used, together with similar reports, as a basis for setting the over-all ceilings, probably about 10 April.

2. Of probable direct operational concern to CIA is the impact [REDACTED] The analysis postulates three possible divisions of the over-all total as between military and other uses. Under one of these, the [REDACTED] would be completely eliminated. Under the second and third, appropriations would be reduced to such levels [REDACTED] that DMB estimates that:

"...the present program could be barely continued, there would not be any possibility of meeting any unexpected rise in the movement [REDACTED] and the program could not be expanded, as presently recommended, to cover high priority groups presently outside the program - [REDACTED]"

3. Is our direct or indirect stake in this program such that we should take an appropriate position in opposition to the proposed cuts? If so, what arguments should be used, and have you any suggestions as to whether the matter should be discussed with NSA?

4. Could we have your views by Monday, 30 March, at the latest?

25X1A9a

NSC Staff Assistant
